

## Letter of Recommendation

27 Aug 2018

### To Whom It May Concern:

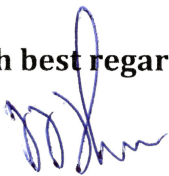

I am pleased to write a letter of recommendation for Sai Siddharth Maram. He has been with our company for 2 months as a software design intern and I personally supervised his work as the CEO of Invento.

We hired Sai Siddharth Maram for helping us build new computer vision algorithms for the Mitra robot. He was involved in two projects. The first one involved building autonomous navigation through SLAM (Simultaneous Localization and Mapping) through depth perception cameras. The second project involved identifying objects in the environment through the YOLO framework.

Sai showed excellent commitment and capability in both the projects. He was able to get us through the proof of concept stage. He has a good grasp of Python programming skills and also was able to quickly learn embedded systems programming.

Besides his design skills, he has excellent team working skills that would be a gift to any organization. He is agile in learning and has the skills to build a career around research and development of new software products.

With best regards,

**Balaji Viswanathan**  
Chief Executive Officer
